

Learnings from the Community Survey

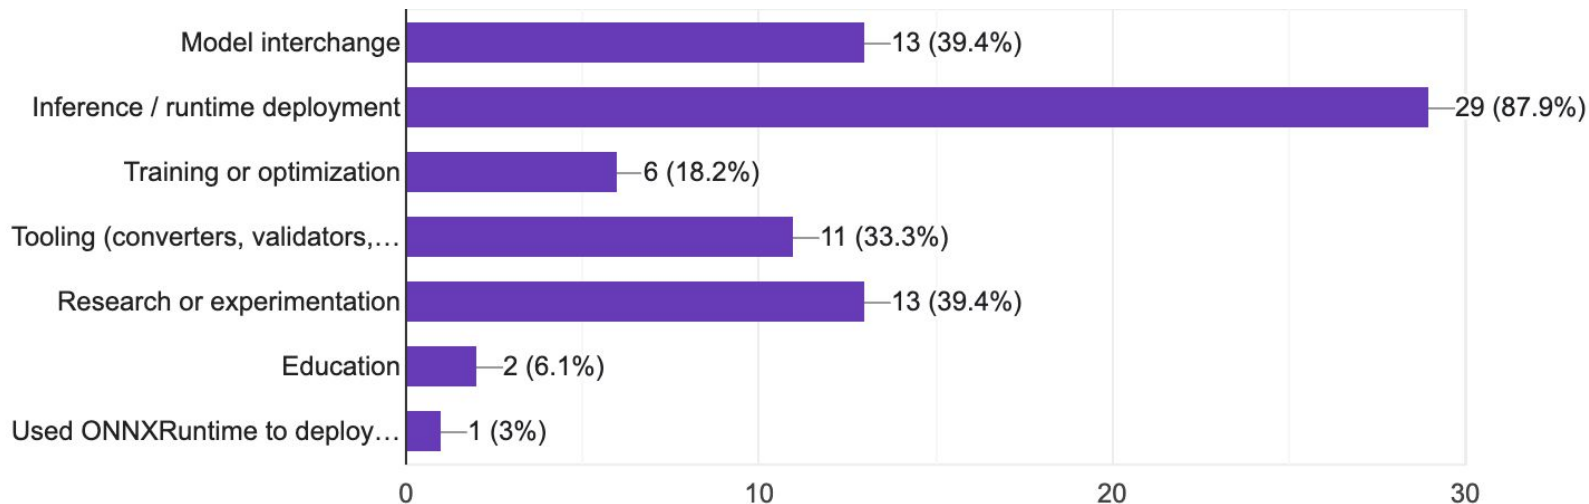

ONNX Community Meetup

June 26th 2026
Dr. Christian Bourjau

Overview and user background

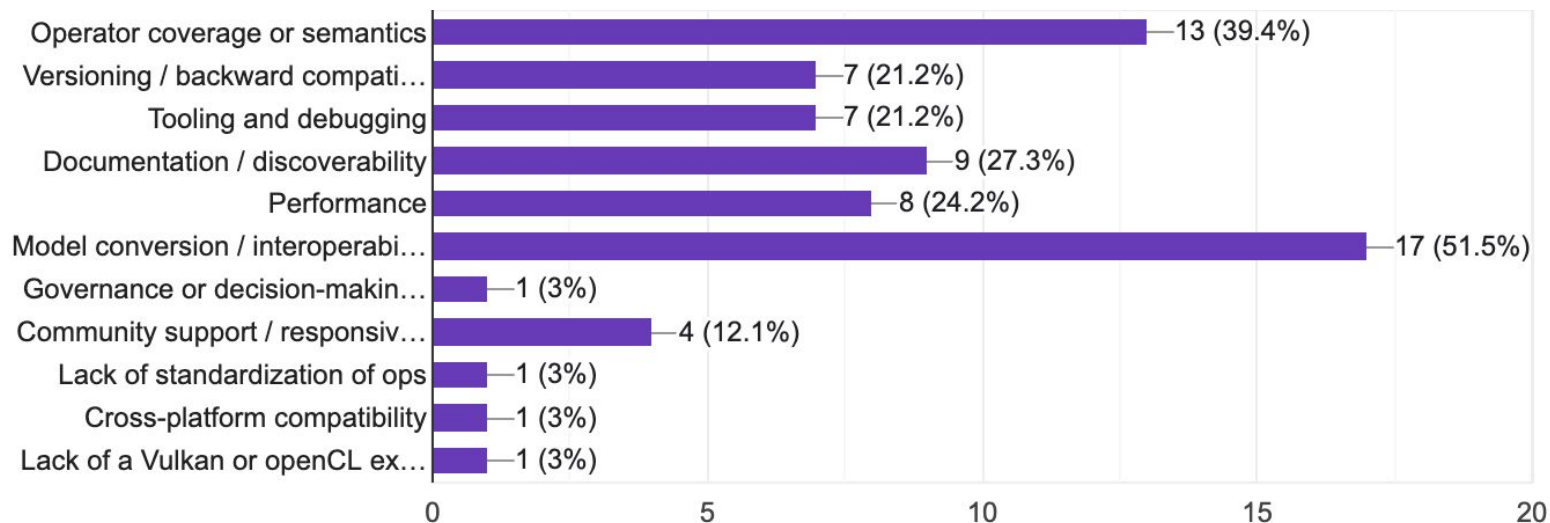

- 33 responses
- 12 questions
- Open from Feb to April 2026

Primary usage (multiple answers)

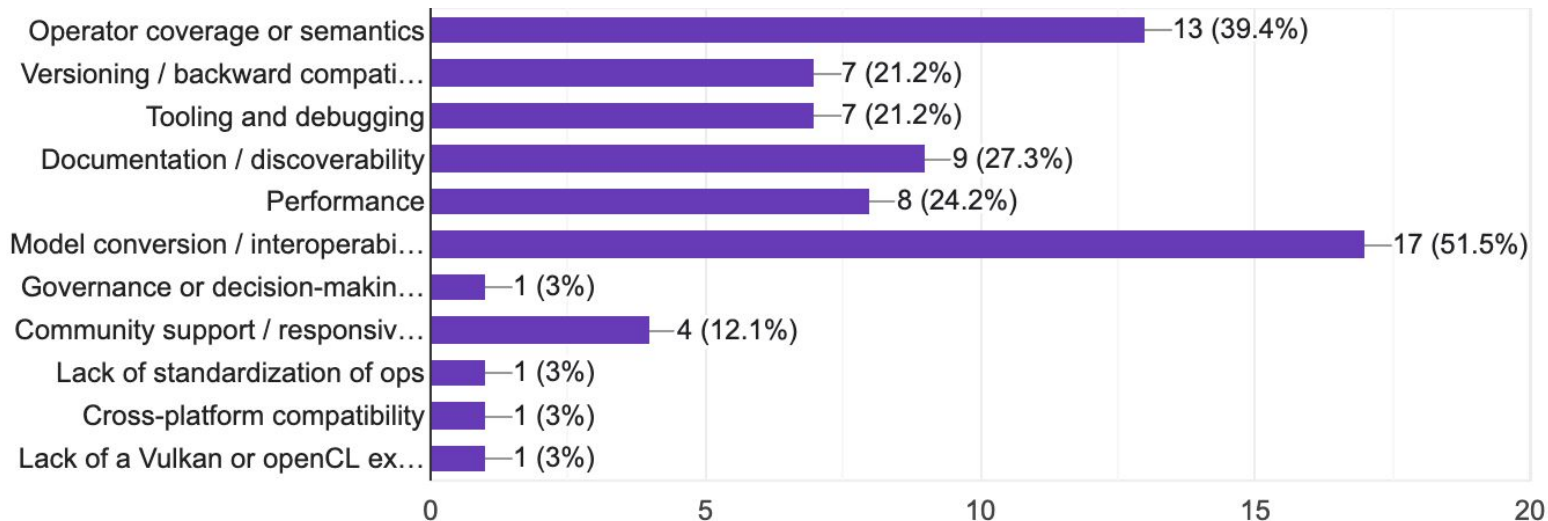

- People ultimately want to use (deploy or interchange) their models!
- Tooling is a recurring topic
- Optimization includes graph optimization

Areas with most friction

Areas with most friction

- Evolution (LLM) / quality of the specification
- Runtime support
- Converters

Stability and evolution of the Specification

- Some definitions are unclear
- Operators missing for LLMs
- Statistical operators

What are we doing?

- Improve processes for adding new operators of high quality
- Lower the barrier of entry for community contributions
- Triaging using AI assistance

Implementations of the standard

- Missing EPs (WebGPU)
- Missing Kernels
- Performance

What are we doing?

- Better specification leads to better implementations
- Creation of an official conformance test suite
- Ensure speedy and easy integration of *onnx*-package downstream

Converters / Optimizers

- Scattered ecosystem
- Varying quality
- Lacking documentation

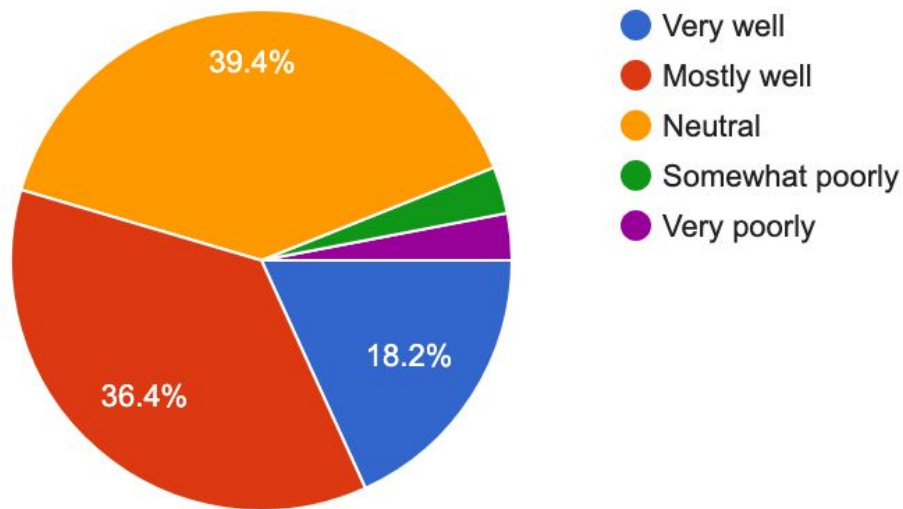

What are we doing?

- Improve documentation
- Develop a coherent user story

But let's not forget

Overall, how well do you think ONNX is heading in the right direction?
